Executive Summary

Overview of accessibility findings from the automated scan conducted on 2 June 2026.

Accessibility Score

91 / 100

This report was generated using axe-core against WCAG 2.0 A/AA and WCAG 2.1 A/AA standards plus best practices. The scan identified **3 accessibility issues** that may prevent users with disabilities from fully accessing this website. No critical issues were detected.

Accessibility Findings

All identified issues grouped by severity, ordered from most to least impactful.

SERIOUS 1 issue

#1 <html> element must have a lang attribute

1 element

Ensure every HTML document has a lang attribute

WCAG reference: <https://dequeuniversity.com/rules/axe/4.11/html-has-lang?application=playwright>

MODERATE 2 issues

#1 Document should have one main landmark

1 element

Ensure the document has a main landmark

WCAG reference: <https://dequeuniversity.com/rules/axe/4.11/landmark-one-main?application=playwright>

#2 All page content should be contained by landmarks

2 elements

Ensure all page content is contained by landmarks

WCAG reference: <https://dequeuniversity.com/rules/axe/4.11/region?application=playwright>

Business Impact

Understanding the consequences of unresolved accessibility barriers.

User Accessibility Barriers

Approximately 1 in 6 people globally live with some form of disability. The 3 issues identified may create significant barriers for users relying on screen readers, keyboard navigation, voice control, or other assistive technologies — effectively excluding a measurable share of your audience.

Legal & Compliance Risk

The European Accessibility Act (EAA) and WCAG 2.1 AA require websites to be accessible. With 0 critical and 1 serious violations, this site carries meaningful compliance risk. Organisations found non-compliant may face regulatory action and reputational damage.

Revenue & Conversion Impact

Inaccessible websites lose customers. Users who encounter barriers during navigation, form completion, or checkout are more likely to abandon the site. Resolving these issues can directly improve conversion rates and expand the addressable market.

SEO & Performance Benefits

Many accessibility improvements — semantic HTML, proper heading structure, descriptive alt text, and meaningful link text — directly benefit search engine indexing. Fixing these issues improves both accessibility and organic search visibility simultaneously.

Bottom line: Investing in accessibility delivers measurable ROI through expanded user reach, reduced legal exposure, improved SEO performance, and stronger brand reputation. Accessibility is not a compliance checkbox — it is a quality signal that demonstrates care for every user.

Recommended Next Steps

A prioritised remediation plan to systematically resolve accessibility issues.

1 Fix 1 serious issue affecting navigation and functionality

Serious issues significantly degrade the experience for screen-reader and keyboard users.

2 Review and improve form accessibility

Ensure every input has a visible, programmatically associated label. Error messages must be descriptive and reachable by keyboard.

3 Validate complete keyboard accessibility

Tab through the entire site. Every interactive element must be reachable, operable, and have a visible focus ring.

4 Audit colour contrast on all text and UI components

Minimum 4.5:1 for body text, 3:1 for large text and interactive components (WCAG 1.4.3 / 1.4.11).

5 Add descriptive alt text to all meaningful images

Use concise, context-appropriate descriptions. Decorative images should carry alt="" so screen readers skip them.

6 Re-scan after remediation to confirm improvements

Run a fresh AuditPilot scan to verify the score has risen and issue count has fallen before presenting to the client.

Accessibility Statement Template

A ready-to-publish statement. Replace **highlighted placeholders** with your details before publishing.

Accessibility Statement for [COMPANY NAME]

[COMPANY NAME] is committed to ensuring digital accessibility for people with disabilities. We are continually improving the user experience for everyone and applying relevant accessibility standards.

Conformance Status

The Web Content Accessibility Guidelines (WCAG) define requirements for designers and developers to improve accessibility for people with disabilities. Our website [WEBSITE URL] is currently working towards conformance with WCAG 2.1 Level AA.

Feedback

We welcome feedback on the accessibility of [WEBSITE URL]. Please let us know if you encounter any barriers:

- Email: [ACCESSIBILITY EMAIL]
- Phone: [PHONE NUMBER]
- Post: [POSTAL ADDRESS]

We aim to respond to feedback within 2 business days.

Technical Specifications

Accessibility of [WEBSITE URL] relies on HTML, CSS, and JavaScript working in combination with assistive technologies and supported browsers.

Assessment Approach

[COMPANY NAME] assessed the accessibility of this website using an automated scan powered by AuditPilot and axe-core on 2 June 2026. The scan returned an accessibility score of **91/100** with 3 issues identified.
