Executive Summary

Overview of accessibility findings from the automated scan conducted on 3 June 2026.

Estimated Remediation Effort: **Low**

Minimal effort required. Quick wins available through targeted, isolated fixes.

Priority Fixes Required

- 1

SERIOUS

Links must be distinguishable without relying on color

1 element affected — Review the WCAG guidance at <https://dequeuniversity.com/rules/axe/4.11/link-in-text-block?application=playwright> for specific remediation steps.
- 2

MODERATE

Landmarks should have a unique role or role/label/title (i.e. accessible name) combination

1 element affected — Review the WCAG guidance at <https://dequeuniversity.com/rules/axe/4.11/landmark-unique?application=playwright> for specific remediation steps.
- 3

MODERATE

All page content should be contained by landmarks

3 elements affected — Review the WCAG guidance at <https://dequeuniversity.com/rules/axe/4.11/region?application=playwright> for specific remediation steps.

This report was generated using axe-core against WCAG 2.0 A/AA and WCAG 2.1 A/AA standards. The scan identified **3 issues**. EAA readiness score: **86/100 — Medium Risk**.

Compliance Overview

WCAG 2.1 AA alignment, European Accessibility Act readiness, and estimated legal risk level.

✓

WCAG 2.1 AA Alignment

Aligned

Score 91/100 against WCAG 2.1 Level AA criteria — the globally recognised standard for web accessibility.

⚖️

EAA Readiness

86/100

European Accessibility Act readiness score, weighted for legal barrier severity (critical violations penalised 1.5× more).

⚠️

Estimated Risk Level

Medium Risk

Overall compliance risk based on violation severity profile and EAA enforcement exposure.

Accessibility Findings

All identified issues grouped by severity, each with structured explanations, fix guidance, and developer examples.

ISSUE SUMMARY

Links must be distinguishable without relying on color

WHY IT MATTERS

This issue may prevent users relying on assistive technologies from accessing the affected content.

BUSINESS IMPACT

Unresolved accessibility violations create compliance risk and reduce usability for users with disabilities.

RECOMMENDED FIX

Review the WCAG guidance at <https://dequeuniversity.com/rules/axe/4.11/link-in-text-block?application=playwright> for specific remediation steps.

Business Impact

Understanding the consequences of unresolved accessibility barriers.

User Accessibility Barriers

Approximately 1 in 6 people globally live with some form of disability. The 3 issues identified may create significant barriers for users relying on screen readers, keyboard navigation, voice control, or other assistive technologies.

Legal & Compliance Risk

The European Accessibility Act (EAA) and WCAG 2.1 AA require websites to be accessible. This site's EAA readiness score of **86/100** indicates **Medium Risk** exposure. No critical violations were detected.

Revenue & Conversion Impact

Inaccessible websites lose customers. Users who encounter barriers during navigation, form completion, or checkout are more likely to abandon the site. Resolving these issues can directly improve conversion rates and expand the addressable market.

SEO & Performance Benefits

Many accessibility improvements — semantic HTML, proper heading structure, descriptive alt text, and meaningful link text — directly improve search engine indexing. Fixing these issues delivers both accessibility and organic search gains simultaneously.

Bottom line: Accessibility investment delivers measurable ROI through expanded user reach, reduced legal exposure, improved SEO, and stronger brand reputation. Accessibility is not a compliance checkbox — it is a quality signal that demonstrates care for every user.

Recommended Next Steps

A prioritised remediation plan to systematically resolve accessibility issues.

1 Fix 1 serious issue affecting navigation and functionality

Serious issues significantly degrade the experience for screen-reader and keyboard users.

2 Review and improve form accessibility

Ensure every input has a visible, programmatically associated label. Error messages must be descriptive and keyboard-reachable.

3 Validate complete keyboard accessibility

Tab through the entire site. Every interactive element must be reachable, operable, and have a visible focus ring.

4 Audit colour contrast on all text and UI elements

Minimum 4.5:1 for body text; 3:1 for large text and interactive components (WCAG 1.4.3 / 1.4.11).

5 Add descriptive alt text to all meaningful images

Use concise, context-appropriate descriptions. Decorative images should use alt="" so screen readers skip them.

6 Re-scan after remediation to confirm improvements

Run a fresh AuditPilot scan to verify the score has risen and issue count has fallen before presenting to the client.

Accessibility Statement Template

A ready-to-publish statement. Replace **highlighted placeholders** before publishing.

Accessibility Statement for [COMPANY NAME]

[COMPANY NAME] is committed to ensuring digital accessibility for people with disabilities. We are continually improving the user experience for everyone and applying relevant accessibility standards.

Conformance Status

The Web Content Accessibility Guidelines (WCAG) define requirements for designers and developers to improve accessibility for people with disabilities. Our website [WEBSITE URL] is currently working towards conformance with WCAG 2.1 Level AA.
